

EU10i

1000W Portable Generator

Super quiet operation

Revolutionary technology and sound proofed casing keeps operational noise to just 52dB(a) at 7m at ¼ load, that of a typical business office.

Pure power

Honda's unique Inverter technology produces a maximum 1000W (900W rated) of clean and smooth power, essential for computers or other sensitive electronic equipment.

Superb efficiency

Unique Eco-Throttle™ runs only as fast as the load demands, improving fuel consumption and extending engine life, achieving up to 8hrs running time on a single tank at ¼ load.

Lightweight and compact

Weighing just 13kg, it is easy to carry, transport and store.

Spill-free refuelling

Extra wide filler cap for easy filling.

Parallel operation

Two units can be linked to provide 1800W rated output (optional cables available).

DC output

12V 8A output for recharging batteries.

Practical controls

Quick and simple starting and running.

Sturdy platform

Rubberised feet minimise vibration and movement.

Wherever you need power, the super-portable EU10i will deliver 1000W of clean, quiet electricity to run and recharge your kit, whether on your travels or around the home. Weighing in at just 13kg, the compact EU10i certainly packs in the power and features. Housed within its curved and ergonomically designed case is a highly efficient Honda 4-stroke engine, 2.1 litre fuel tank and Inverter electronics.
